Helsinki, Finland | Valid right to work in Finland

Professional Summary

Full stack developer who works across the whole lifecycle, from design discussions with non-technical stakeholders through to running the result in production. Front end I work in **TypeScript, JavaScript, React**, HTML and CSS with Next.js and TanStack, and I treat layout and usability as part of the job rather than an afterthought. Server side I work in **Node.js** over **relational databases**, building **REST and API-centric** services, and I pick up new languages when a problem calls for one. I build my own **CI/CD pipelines** with typechecking, linting, automated testing and static analysis gating every merge, and I ship in **Docker** to cloud infrastructure. I use **AI-assisted development** daily and have built production systems on top of LLMs, including a seven-agent pipeline that red-teams its own output, so I treat generated code as a draft I am accountable for reviewing. Concrete results include an in-house booking platform handling 200+ reservations per month that cut booking time by over 50%, REST APIs verified against 1,000+ simulated transactions, and a 30 to 40% frontend performance gain. I am looking to join a team building **proprietary in-house products** where I can raise the technical standard alongside people I learn from.

Work Experience

Web Administrator / Technical Support

Jul 2023 - Apr 2026

Flavour Ventures Oy - Helsinki, Finland

- Responsible for development and maintenance of the Pizzala website, a restaurant business where the site and ordering flow are the customer-facing front door.
- Designed and implemented a custom **in-house** online booking system capable of handling **200+ reservations per month**, replacing phone and email bookings.
- Reduced customer booking time by **over 50%** through a streamlined reservation flow and improved **user experience**.
- Maintained and optimized the restaurant's website and POS system, resolving technical issues and ensuring **uptime** during high-traffic events.
- Managed digital marketing efforts, including Instagram content and promotions, driving engagement and brand visibility.
- Supported large-scale events (150-300 guests) for clients such as Ubisoft, Metacore, and Gofore, ensuring smooth operations and customer satisfaction.

Software Developer Trainee

Nov 2022 - Dec 2023

Integrify - Helsinki, Finland

- Built a full-stack solo e-commerce project from scratch, including product browsing, cart logic, authentication, and order flow.
- Developed and integrated **REST APIs** that handled **1,000+ simulated transactions** during testing, ensuring stable performance and predictable response times.
- Improved frontend performance by **30-40%** through code optimization, efficient state handling, and UI refinements.
- Strengthened development discipline through self-directed learning, version control, debugging, and iterative feature development.
- Practiced **deployment, containerization, and cloud hosting** workflows while delivering project updates independently and consistently.

Awards

Winner of Norrin Challenge | Aalto AI x AI for Good Hackathon | <https://fiveguys1.lovable.app>

Projects

ReguLens | React 19, TypeScript, Node, PostgreSQL, TanStack Start, multi-provider LLM integration

<https://regulens-mu.vercel.app>

- Designed and built a 7-stage **AI-driven** service architecture that produces cited compliance opinions on the EU AI Act from plain-English descriptions or uploaded documents, covering front end, back end, data layer, and deployment. Won first place at the Norrin AI Act Challenge.
- Built a self-critique stage that red-teams the system's own conclusion before it reaches the user, and separated facts, assumptions, references and reasoning in the output so a reader can tell what is grounded and what is inferred.
- Validated every record against typed schemas before persistence, so malformed model output fails at the boundary rather than propagating into the database.
- Integrated multiple external providers behind one internal interface with **timeout, retry, and fallback** logic, keeping the service usable when an upstream dependency degrades.
- Enforced authentication and per-user data isolation through Postgres row-level security, keeping access control at the data layer.

AI Chatbot Platform for Small Businesses | *Next.js, React, TypeScript, PostgreSQL, GitHub Actions, Vitest, CodeQL*

<https://my-chatbot-app-chi.vercel.app>

- Built a reusable **multi-tenant** platform serving restaurants, cafes, salons and gyms, loading each business's services, menus and FAQs dynamically from PostgreSQL with strict per-tenant data separation.
- Built a full **CI/CD pipeline** with parallel jobs for typechecking, linting, unit testing and production builds, gating every merge on a full green run, and automated deployment from the pipeline.
- Integrated CodeQL static security analysis so findings surface automatically before merge rather than after release.
- Designed the data model for GDPR-friendly storage, persisting business information only and keeping the compliance surface small.

3C Cleaning Website | *Next.js 14, React, TypeScript, SCSS, react-i18next*

<https://www.3ccleaning.fi>

- Built and deployed a bilingual (FI/EN) **customer-facing** website for an external client, serving as their primary lead generation channel, working directly with the business owner to turn a rough brief into a finished product.
- Migrated the codebase from Create React App to the **Next.js App Router** for improved SEO and performance, rebuilding the routing and rendering model rather than porting it as-is.
- Developed 7 pages including service catalog, booking form with email integration, testimonial carousel and FAQ accordion, with full internationalisation through react-i18next.
- Designed the **layout and responsive behaviour** across devices, configured security headers, and deployed on a custom domain.

Education

Bachelor in Business Information Technology

LAB University of Applied Sciences - Lahti, Finland

Skills

Front-End: TypeScript, JavaScript, HTML, CSS, SCSS, React 19, Next.js App Router, TanStack Start/Router, Vite, React Native, Tailwind, shadcn/ui, responsive and cross-browser UI, internationalisation, layout and usability

Back-End: Node.js, REST and API-centric architecture, server functions and SSR, third-party system integration, authentication and access control, Python and C#/.NET fundamentals, Go, proven ability to pick up new languages and tools

Databases: PostgreSQL, SQL, relational data modelling, query optimization, transactions, multi-tenant data separation, row-level security, Supabase, pgvector

APIs & Integration: REST API design and consumption, API testing with Postman, integration hardening with timeout, retry and fallback, multi-provider abstraction, third-party service integration

Cloud & DevOps: Git, Docker, CI/CD pipelines in GitHub Actions (parallel typecheck, lint, test, build), automated deployment, AWS, Azure, Vercel, Render, Linux command line, static analysis with CodeQL, test automation with Vitest

AI-Driven Development: Daily use of agentic coding tooling including Claude Code, with responsibility retained for reviewing and verifying generated code; multi-agent orchestration, RAG with pgvector embeddings, structured output validation, evaluation and self-critique loops, prompt-injection hardening

Ways of Working: Agile and Scrum, Jira, code review, continuous improvement, collaboration with non-technical stakeholders and external clients, translating business problems into technical requirements, technical documentation, automating repetitive work wherever possible

Languages

Vietnamese - Native

English - Full professional fluency (C2)

German - Basic conversational (studied until C1)

Finnish - Basic (studied until B1)
