Professional Summary

Full stack developer who owns a system end to end rather than handing off the inconvenient parts, across the backend, the frontend, and increasingly the AI layer sitting on top of both. I work deep in **TypeScript and JavaScript**, across **React, Next.js**, and Node.js, with real experience in C#/.NET, Java and Spring Boot, and Go when a project calls for them, and **PostgreSQL** underneath nearly everything I build. I have genuine, hands-on experience with **generative AI**: multi-agent pipelines, grounded retrieval, and prompt design that keep model output checked against real sources rather than trusted on sight, work that placed in two separate AI-focused hackathons this year. Nearly three years running the entire digital presence of a live business as its only technical person, where I replaced a manual process with one handling **200+ transactions a month**, taught me to turn a described business need into working software and to support the people who use it. My work spans a multi-tenant booking platform I designed, built, and still operate, a multi-agent compliance tool, and a conversational AI product with real third-party integrations. I am looking for a team where I can keep building full stack products with AI genuinely built in, not bolted on.

Work Experience

Web Administrator / Technical Support **Jul 2023 – Apr 2026**

Flavour Ventures Oy - Helsinki, Finland

- Responsible for development and maintenance of the Pizzala website, a restaurant business where the site and ordering flow are the customer-facing front door.
- Designed and implemented a custom online booking system capable of handling **200+ reservations per month**, replacing phone and email bookings.
- Reduced customer booking time by **over 50%** through a streamlined reservation flow and improved user experience.
- Maintained and optimized the restaurant's website and POS system, resolving technical issues and ensuring **uptime** during high-traffic events.
- Managed digital marketing efforts, including Instagram content and promotions, driving engagement and brand visibility.
- Supported large-scale events (150–300 guests) for clients such as Ubisoft, Metacore, and Gofore, ensuring smooth operations and customer satisfaction.

Software Developer Trainee **Nov 2022 – Dec 2023**

Integrify - Helsinki, Finland

- Built a full-stack solo e-commerce project from scratch, including product browsing, cart logic, authentication, and order flow.
- Developed and integrated **REST APIs** that handled **1,000+ simulated transactions** during testing, ensuring stable performance and predictable response times.
- Improved frontend performance by **30–40%** through code optimization, efficient state handling, and UI refinements.
- Strengthened development discipline through self-directed learning, version control, debugging, and iterative feature development.
- Practiced **deployment, containerization, and cloud hosting** workflows while delivering project updates independently and consistently.

Awards

Winner, Norrin Challenge, Aalto AI x AI for Good Hackathon | https://fiveguys1.lovable.app

5th Place, Ultrahack Quantum x Finance Hackathon | https://github.com/ELNAUL99/q-sieve

Projects

Booking Widget (Sisu Booking) | *Next.js*, *React*, *TypeScript*, *Tailwind*, *shadcn/ui*, *Supabase*
https://booking-widget-orpin.vercel.app

- Designed and built a **multi-tenant** restaurant booking product end to end: owners manage branding, hours, and pricing from a dashboard, with changes live on the customer-facing widget immediately, no redeploy.
- Server re-validates every booking against the owner's own configured business rules rather than trusting the client, rejecting with the same message the customer already sees.
- Same lineage as the booking system in my work history (200+ reservations a month for a real restaurant), so this is a product I have operated and supported, not just prototyped.

ReguLens | *TypeScript*, *React*, *TanStack Start*, *Supabase*, *PostgreSQL*, *pgvector*, *Zod*
https://regulens-mu.vercel.app

- Built a **multi-agent** pipeline producing citation-grounded EU AI Act opinions, with **prompt design** and a retrieval layer behind every answer, rebuilt solo into a production system after a hackathon weekend.

- An adversarial critique stage red-teams its own conclusion, and a deterministic verifier drops any output it cannot trace back to a real source before it reaches a user.
- Every model output validated against a schema before persistence, with prompt-injection defences on all user text, the same review-and-validate discipline I apply to any AI-generated output.

AI Chatbot for Local Businesses | *Next.js*, *React*, *TypeScript*, *Tailwind*, *Groq*, *Tavily*, *Supabase*, *Google Calendar*
https://my-chatbot-app-chi.vercel.app

- Built an **AI-powered** conversational agent, embeddable on any site with a single script tag, no SDK integration required.
- Grounded responses: a retrieval pipeline combining business data with live web search cuts hallucinations instead of relying on the model's own output.
- Actionable, not just conversational: writes events to Google Calendar through a service account via tool-calling, with origin checks and input validation.

Education

Bachelor in Business Information Technology
LAB University of Applied Sciences - Lahti, Finland

Bachelor in Computer Engineering
HCMUTE - Ho Chi Minh City, Vietnam

Skills

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind, shadcn/ui, Material UI, HTML and CSS, responsive and cross-browser UI

Backend: Node.js, Spring Boot and Java, C#/.NET (ASP.NET Core, EF Core), Go, REST API design, authentication (JWT, OAuth-style flows)

Databases: PostgreSQL, SQL, relational data modelling, query optimization, transactions, row-level security

AI & Generative AI: Multi-agent orchestration, prompt design, grounded retrieval (RAG with pgvector), schema-validated LLM output, daily use of GitHub Copilot and Claude in production work with a review-and-validate habit

Cloud & DevOps: Google Cloud, AWS, Azure, Docker, Git and GitHub (pull requests, code review), CI/CD pipelines in GitHub Actions, Vercel, Render

Quality & Integration: Unit and integration testing, third-party API integration, input validation, writing maintainable code

Ways of Working: Agile and Scrum, Jira, collaboration with non-technical stakeholders, translating business needs into working systems, proactive and independent delivery

Languages

Vietnamese - Native
English - Full professional fluency (C2)
German - Basic conversational (studied until C1)
Finnish - Basic (studied until B1)

Certifications

Project Manager Skillpath: Agile, Scrum & Jira | Udemy *Jun 2026*
Linux Command Line: From Zero to Hero | Udemy *Dec 2025*
Webservices API Testing with Postman - Complete Guide | Udemy *Nov 2025*
Relational Databases & SQL: Complete Guide for Developers | Udemy *Nov 2025*
